Summary

Over 5 years building systems end to end across web, mobile and desktop. I take on the whole problem, from database to deploy, and record important decisions with their context, alternatives and cost.

Experience

Kaffa

2025, present

Full stack on the product team

- **16 GB → 1.5 GB:** built the solution that cut the base needed to run the app by more than 90%.
- **DWG import past the limit:** chunked loading into the SWT canvas went past the maximum file size and reduced latency when moving the map.
- **AI in the QA workflow:** AI-generated documentation for testing bugs and user stories, reducing the testing bottleneck.
- Responsible for the Android layer. React on the web, SWT on desktop, Kotlin and Java on the Nomad server, maps and GIS.

SENAI Innovation Institute

2021 to 2025

Full stack developer

- **12 months in 6:** joined with half the deadline gone and the backend at square one, took over the architecture and the entire backend, and we delivered beyond the requested scope.
- **SSE:** async communication between back and front with Server-Sent Events, documented so the client could evolve it alone.
- **The AI team's API:** took over the FastAPI service and integrated the KPI and inference algorithms into the backend.
- **Large files:** direct upload with signed URLs, using Google Cloud Storage and MinIO.

Projects

Citria. App and web connecting patients and nutritionists between appointments. React Native, NestJS, PostgreSQL, e2e tests with Testcontainers.

Inside. Software house management, from lead to cash split. Spring Boot, OAuth 2 and OIDC, row level security, transactional outbox.

Íris. Colour lab to try palettes with your own logo, with no backend: the file never leaves the browser. React, TypeScript.

Whatchu. Draws what to watch with combinable weights and friends' lists. React, Node.js, Prisma, Docker. Open source.

Stack

Front end
React, Next.js, TypeScript

Back end
Node.js, NestJS, Express, Python, Django REST Framework, FastAPI, Java, Spring Boot, Kotlin

Mobile
React Native, Expo, Android

Data
PostgreSQL, MySQL, Prisma, S3

Architecture
Modular monolith, microservices, DDD, multi-tenancy, OAuth 2, OIDC

Infra and CI/CD
Docker, nginx, Cloudflare, GitHub Actions

Tests
Vitest, Jest, pytest, Testcontainers

Education

Computer Science

UNIP, 2020 to 2023

Technical degree in Mechatronics

ETEP, 2016 to 2018. Programming team at the FIRST robotics competition

Languages

Portuguese and English day to day
